

Woodale Woodland

About the wood...

Set in the stunning Nidderdale landscape Woodale wood is an important habitat for native wildlife, including endangered species such as common redstart, cuckoo, and black grouse. The new woodland will also grow to support ancient woodland flora, invertebrates, and other wildlife. Tree planting on the site links and expands existing woodland, with care taken to support biodiversity.

Several other endangered species of bird will also benefit from the woodland including: song thrush, mistle thrush, fieldfare, redwing, ring ouzel and spotted flycatcher - which are all UK Biodiversity Action Plan species.

7,000 trees are planted at Woodale, including native species such as birch, oak, hawthorn, rowan, bird cherry, holly, some gorse and Scots pine.

How to get there...

Woodale woodland is planted at High Woodale Farm in Upper Nidderdale, in partnership with landowner Yorkshire Water. Woodale is situated on private land – but can be seen from the circular path around Scar House Reservoir - where there is a free Yorkshire Water car park and facilities.

To get there, follow Yorkshire Water's private tarmac access road, which turns off to the right about 100 metres after Lofthouse village when driving towards Middlesmoor.

From Pateley Bridge: Follow Low Wath Road for about 7 miles until you arrive at Lofthouse village.

From Masham: follow Fearby Road, which becomes Keld Bank and passes through Healey and Leighton. After Leighton Reservoir, Keld Bank becomes Pott Bank, then Pott Moor High Road, then Trapping Hill before entering Lofthouse Village. Take a right at the T-junction, then look out for the Yorkshire Water access road on the right after about 150m.

Yorkshire Dales Millennium Trust is a small charity doing big things to support people, landscape and wildlife in the Yorkshire Dales. By supporting our work you have helped to restore part of the wonderful jigsaw of features that makes the Yorkshire Dales landscape so special.

We're passionate about trees and with your help we've planted over 1.3 million new native broadleaf trees to date, creating hundreds of natural woodlands which will absorb carbon dioxide, create vibrant wildlife habitats and enrich the landscape for people to enjoy.

Thank you for your vital support.
